Please find below and/or attached an Office communication concerning this application or proceeding.

Office Action Summary

Application No.

09/543,754

Applicant(s)

SEKIHATA, OSAMU

Examiner

Shick C. Hoim

Art Unit

2666

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 31 May 2005.
- 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-18 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☒ Claim(s) 16-18 is/are allowed.
- 6) ☒ Claim(s) 1-15 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☒ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☒ All b) ☐ Some * c) ☐ None of:
1. ☒ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. _____.
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
- * See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

- 1) ☒ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☐ Information Disclosure Statement(s) (PTO-1449 or PTO/SB/08)
Paper No(s)/Mail Date _____.
- 4) ☐ Interview Summary (PTO-413)
Paper No(s)/Mail Date. _____.
- 5) ☐ Notice of Informal Patent Application (PTO-152)
- 6) ☐ Other: _____.

Art Unit: 2666

DETAILED ACTION

Response to Arguments

1. Applicant's arguments with respect to claims 1-18 have been considered but are moot in view of the new ground(s) of rejection.

Specification

2. The lengthy specification has not been checked to the extent necessary to determine the presence of all possible minor errors. Applicant's cooperation is requested in correcting any errors of which applicant may become aware in the specification.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States or

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United

Art Unit: 2666

States and was published under Article 21(2) of such treaty in the English language.

4. Claims 1-3, 5-7, 9, and 10 are rejected under 35 U.S.C. 102(b) as being anticipated by Williams et al. (5,883,891).

Regarding claims 1, 5, 9:

Williams et al. disclose a frame forwarding installation for sending a received frame to a path conforming to a destination address contained in a header of the frame, which has been received from a transmitting terminal (see col. 1 lines 21-25, the background of the invention, which recite data being in packets having a header containing control and source and destination address information clearly anticipate the frame containing a header including the destination address), comprising: an application, application-type, or address-match discriminating unit for referring to the header of the received frame and determining whether an application of a host layer in the transmitting terminal is a real-time application, the application-type, or transmission-source address matches an address already registered (see Fig. 1B and col. 5 lines 1-35 which recite the servers and packets using IP addresses header and identifiers determining how the Internet will carry time-

Art Unit: 2666

sensitive data packets and real-time data such as voice clearly reads on the application discriminating unit referring to the header to determine whether application is real-time and address match); and a frame transmitting unit for sending in duplicate the received frame to a plurality of paths in parallel in the direction of a destination if the application is a real-time application, is a predetermined type, or the addresses match, respectively (see abstract, col. 2 lines 11-22 which recite because of delays of transmission and lost connections, audio quality or phone conversation, and real-time critical type data transmissions are redundantly send over multiple diverse paths, and col. 2 line 66 to col. 3 line 8 which recite the use of destination address in the header including pre-selected routes clearly anticipate sending in duplicate frame to a plurality of paths in parallel in the direction of a destination if the application is a real-time application, is a predetermined type, or the addresses match).

Regarding claims 2, 6:

Williams et al. disclose wherein said application discriminating unit determines that the application of the host layer is a real-time application when a port number of the received frame matches a port number of the real-time application and wherein said application-type discriminating

Art Unit: 2666

unit discriminates the type of application of the host layer frame a TCP port number of the received frame (see col. 2 lines 11-22 which recite the reserved permanent virtual circuits and dedicated transmission line for real-time data transmission clearly reads on real-time application being application when a port number of the received frame matches a port number of the real-time application as in claim 2 and col. 2 line 66 to col. 3 line 8 which recite the use of the Internet service provider clearly reads on the TCP port number as in claim 6).

Regarding claims 3, 7, 10:

Williams et al. disclose wherein said frame transmitting unit has an address table which specifies the plurality of interface units in association with a destination address and sends the received frame to the plurality of paths via the plurality of interface units, which conform to the destination address, if the application is a real-time application (see col. 7 line 62 to col. 8 line 26 which recite the use of a route ID table clearly reads on the address table).

5. Claims 12 and 14 are rejected under 35 U.S.C. 102(e) as being anticipated by Yeo et al. (2002/0070958).

Regarding claims 12, 14:

Art Unit: 2666

Yeo et al. disclose the frame forwarding installation for receiving a frame, which is directed toward a subordinate destination terminal, from a path and transmitting the frame to the destination terminal, comprising: a storage unit for storing an identifier of a frame that has been transmitted to the destination terminal; and a redundant-frame filter for determining whether the frame identifier of a frame newly received from a path has been stored in said storage unit, discarding the received frame if the received frame is the frame that has already been received, and transmitting the received frame to the destination terminal and storing the identifier of the received frame in said storage unit if the received frame is not the frame that has already been received as in claim 12 and wherein the frame identifier is a computational result obtained by subjecting a specific portion of the received frame to a fixed computation as in claim 14 (see paragraph 0053 which recite different methods for identifying redundant frames including using the color histograms, and motion vector correlation of the frames as the identifier clearly reads on the identifier as argued in page 11 line 14 to page 12 line 11 of the remarks of 5/31/05 and the frame identifier being a computational result as in claim 14; and paragraph 0054 which recite identifying and removing redundant frames from

Art Unit: 2666

the frame store clearly reads on the storage unit and the redundant-frame filter for discarding frame that has already been received as claimed).

Claim Rejections - 35 USC § 103

6. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

7. Claims 4, 8, and 11 are rejected under 35 U.S.C. 103(a) as being unpatentable over Williams et al. (5,883,891) in view of Kuwabara et al. (5,909,439).

Regarding claims 4, 8, 11:

For claims 4, 8, 11, Williams et al. disclose the installation described in paragraph 4 of this office action. Williams et al. disclose all the subject matter of the claimed invention with the exception of the tag attaching unit for attaching a tag, which includes a frame identifier, to a frame; wherein a frame forwarding installation on the side of a

Art Unit: 2666

receiving terminal utilizes the frame identifier when determining whether an identical frame has already been received or not as in claims 4, 8, 11.

Kuwabara et al. from the same or similar fields of endeavor teach that it is known to provide the tag attaching unit for attaching a tag, which includes a frame identifier, to a frame; wherein a frame forwarding installation on the side of a receiving terminal utilizes the frame identifier when determining whether an identical frame has already been received or not (see col. 6 lines 28-38 and col. 7 lines 4-16 which recite the frames including the identifier and sequence number used for reconstituting the original information clearly reads on the tag attaching unit for attaching a tag, which includes a frame identifier). Thus, it would have been obvious to the person having ordinary skill in the art at the time the invention was made to provide the tag attaching unit for attaching a tag, which includes a frame identifier, to a frame; wherein a frame forwarding installation on the side of a receiving terminal utilizes the frame identifier when determining whether an identical frame has already been received or not as taught by Kuwabara et al. in the communications installation of Williams et al. The tag attaching unit for attaching a tag, which includes a frame identifier, to a frame;

Art Unit: 2666

wherein a frame forwarding installation on the side of a receiving terminal utilizes the frame identifier when determining whether an identical frame has already been received or not can be implemented by connecting the tag attaching unit to the transmitting apparatus of Williams et al. The motivation for using the tag attaching unit as taught by Kuwabara et al. in the communication apparatus of Williams et al. being that it provides more efficiency for the system since the system can quickly identify the frames at the receiving end.

8. Claims 13 and 15 are rejected under 35 U.S.C. 103(a) as being unpatentable over Yeo et al. (2002/0070958) in view of Kuwabara et al. (5,909,439).

Regarding claims 13 and 15:

For claims 13, 15, Yeo et al. disclose the installation described in paragraph 5 of this office action. Yeo et al. disclose all the subject matter of the claimed invention with the exception of wherein the frame identifier is a sequence number contained in the frame and wherein the frame identifier is a frame identifier contained in a tag that has been attached to a received frame as in claims 13, 15.

Art Unit: 2666

Kuwabara et al. from the same or similar fields of endeavor teach that it is known to provide wherein the frame identifier is a sequence number contained in the frame and wherein the frame identifier is a frame identifier contained in a tag that has been attached to a received frame (see col. 6 lines 28-38 and col. 7 lines 4-16 which recite the frames including the identifier and sequence number used for reconstituting the original information clearly reads on the tag attaching unit for attaching a tag, which includes a frame identifier). Thus, it would have been obvious to the person having ordinary skill in the art at the time the invention was made to provide wherein the frame identifier is a sequence number contained in the frame and wherein the frame identifier is a frame identifier contained in a tag that has been attached to a received frame as taught by Kuwabara et al. in the communications installation of Yeo et al. The frame identifier being a sequence number contained in the frame and wherein the frame identifier is a frame identifier contained in a tag that has been attached to a received frame can be implemented by providing the frame identifier as a sequence number contained in the frame and wherein the frame identifier is a frame identifier contained in a tag that has been attached to a received frame to the transmitting apparatus of Yeo et al. The motivation for providing wherein the frame

Art Unit: 2666

identifier is a sequence number contained in the frame and wherein the frame identifier is a frame identifier contained in a tag that has been attached to a received frame as taught by Kuwabara et al. in the communication apparatus of Yeo et al. being that it provides more efficiency for the system since the system can quickly identify the frames at the receiving end.

Allowable Subject Matter

9. Claims 16-18 are allowed.

Conclusion

10. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Wolf discloses a process and devices for establishing point-to-multipoint connections and multipoint-to-point connections (see col. 1 lines 52-67 which recite the received duplicated data stream used for transmission quality and reliability).

11. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is

Art Unit: 2666

reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

12. A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Shick C. Hom whose telephone number is 571-272-3173. The examiner can normally be reached on Monday to Friday with alternate Fridays off.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Seema Rao can be reached on 571-272-3174. The fax phone number for the

Art Unit: 2666

organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only.
